BEST SUSTAINABLE ENERGY - COMMERCIAL

Stephen Lawrence Constructions

PROJECT LOCATION

Lockhart Council Offices
LOCKHART

JUDGES COMMENTS

The Lockhart Shire Council building incorporated a very high level of water and energy efficiency.

The construction consisted of double glazed and low-e windows, structural steel verandahs with expanded mesh panels with angled shading to allow sun to penetrate in winter months and shade in Summer. Timber was sourced locally and two 22,500 L water tanks were installed to provide all water for use in amenities and gardens. A Solar photovoltaic system was installed connected to a 9.8kw grid to generate an average of 13,720kw per year.

The judges commended the builder on achieving an innovative and energy efficient council building and creating an asset to the Shire.
